

HEATLIGHT TECHNOLOGY

HLP2000 Series

The 2000 model is the ideal heater to compliment any existing full sized drying system. Designed to be used with our existing lightweight stand, with or without the HLPT 30 minute timer. It provides the ideal additional spot drying unit for any number of small jobs.

The 500mm 1kW GC Shortwave Infrared lamp fitted into our 580mm cassette easily covers that horizontal or vertical repair. Offering quick and simple adjustment up and down the full length of the 1.8m stand. This means that any bumper or door jam repair can be covered easily and quickly.

This model is intended for use on small to medium spot repairs and drying jobs, e.g. *Engine drying - Stripe removal - Bumper scuffs - Filler drying - stone chip repairs and pre heating prior to spraying.*

The 2000 Series comes ready fitted with a 1.0Kw Glare Control short wave lamp, offering the same high output as the full size models.

2000 Series - Models available

HLP2000S - Standard model complete with 5 part stand

HLP2000T - Twin cassettes complete with 5 part stand
